PROJECT BRIEF

C&K Ingenieros — Corporate Website Redesign

Project: New corporate website for CYK Ingeniería y Construcción Eléctrica SpA
Domain: cykingenieros.cl
Language: Spanish (Chile, es-CL)
Technology: Astro, TypeScript, HTML, CSS
Hosting: Hostinger Premium Web Hosting
Pages: 5 — Inicio, Nosotros, Servicios, Proyectos, Contacto

---

1. YOUR ROLE

Act as a senior web designer, UX/UI specialist, brand designer, and Astro frontend developer.

Design and implement a modern, sophisticated, professional corporate website for C&K Ingenieros, a Chilean company specializing in electrical engineering, construction, technical consulting, maintenance, and diagnostic services.

The website must communicate:

- Technical excellence and engineering expertise.
- Precision, reliability, and professionalism.
- Experience with complex electrical infrastructure.
- Confidence, discretion, and personalized attention.
- Premium engineering services for demanding business clients.

The result should feel like a website for a highly specialized engineering consultancy, not a generic construction company or a template-based business website.

Design philosophy: Modern, technical, elegant, restrained, confident, and trustworthy.

Avoid overly decorative elements, generic corporate stock imagery, flashy animations, and exaggerated marketing language.

---

2. PROVIDED REFERENCE MATERIALS

Use the following materials as primary references.

A. Karen's website mockup

31 screenshots provided in a ZIP archive, plus two additional homepage screenshots.

These represent the client's preferred visual direction.

Study them carefully to understand:

- Color palette and contrast.
- Typography hierarchy.
- Large editorial headings.
- Section structure and spacing.
- Buttons and calls to action.
- Card layouts.
- Alternating light and dark backgrounds.
- Visual rhythm between sections.
- Mobile presentation.

Important: These screenshots represent the client's desired visual identity. Do not replace their established style with an unrelated aesthetic.

They are mobile screenshots, so develop a thoughtful desktop layout rather than merely stretching the mobile design.

B. Website content

Document: `Texto página web .pdf`

This 12-page document contains the client's proposed website copy and detailed descriptions of services, technical capabilities, company philosophy, and contact information.

Treat this as the **primary source of content**.

Preserve the technical meaning, professional tone, and terminology. Reorganize and lightly edit for readability and web presentation when necessary, but do not invent qualifications, certifications, statistics, technical achievements, or promises.

C. Official company logo

File: `Logo editable_Mesa de trabajo 1.jpg`

Use the official logo supplied by the client.

Maintain the original proportions and colors. Do not redesign or recreate the logo with AI.

If a higher-quality vector version becomes available, use that instead.

D. Previous website

Historical reference:

https://web.archive.org/web/20250209085228/https://cykingenieros.cl/

Use the archived website only to identify potentially useful historical information, completed projects, and existing visual assets.

The new website should not reproduce its old layout or outdated visual style.

Any historical client names, project details, or photographs must be approved before publication.

E. Previous homepage video

https://youtu.be/rTtYGLrIW6g

Treat this as an optional multimedia asset.

Do not automatically place it as a full-screen autoplay background. Evaluate whether it adds value to the new design and whether its content is still current.

---

3. BRAND IDENTITY & COLOR SYSTEM

The client explicitly selected the navy-blue, gold, and white aesthetic shown in her mockup.

Primary website colors

Color	Hex	Purpose
Deep navy	#081E47	Hero sections, premium backgrounds, headings, footer
Muted gold	#D7B257	Buttons, highlights, decorative lines, accents
White	#FFFFFF	Main backgrounds, cards, negative space

These values were sampled approximately from the provided mockup screenshots.

Original logo colors

Color	Approx. hex
Deep indigo	#1B1464
Orange	#FF9E02
Yellow	#F1C40F

The logo's colors differ slightly from the mockup.

Design decision: Preserve Karen's navy-and-gold aesthetic as the primary website palette. Keep the logo in its original colors, and use its brighter yellow/orange only sparingly where appropriate.

Visual styling

- Large, carefully composed typography.
- Strong headline hierarchy.
- Generous whitespace.
- Alternating navy and white sections.
- Muted gold CTA buttons on navy backgrounds.
- Thin gold dividers and editorial section labels.
- Clean rectangular cards with subtle borders.
- Minimal use of rounded corners.
- High-contrast text.
- Consistent alignment and spacing.
- Restrained, elegant hover interactions.

The website should feel technically precise rather than playful.

Use modern, legible typography suitable for Spanish-language corporate communication.

Avoid excessive gradients, oversized shadows, glassmorphism, neon colors, and generic AI-style design effects.

Ensure accessible contrast, particularly when using gold on white.

---

4. TARGET AUDIENCE

Primary visitors include:

- Engineering managers.
- Facilities and maintenance managers.
- Industrial companies.
- Medical and healthcare institutions.
- Agricultural and wine-producing businesses.
- Construction project managers.
- Procurement and technical decision-makers.
- Organizations requiring independent technical advice.

Visitors should quickly understand what C&K does, where its expertise lies, why its technical approach matters, and how to request an evaluation.

The primary conversion goal is **qualified business inquiries**, not online sales.

---

5. WEBSITE INFORMATION ARCHITECTURE

Create exactly five main pages.

PAGE 1 — INICIO

Purpose: Introduce the company, establish credibility, communicate its technical specialization, and guide visitors toward services or consultation.

Section A — Navigation

- Official company logo.
- Inicio.
- Nosotros.
- Servicios.
- Proyectos.
- Contacto.
- Primary CTA: "Solicitar evaluación".

Use a responsive header with mobile navigation.

Check structure of Inicio in a file HOMEPAGE DESIGN Brief — C&K INGENIEROS

PAGE 2 — NOSOTROS

Purpose: Build trust and communicate C&K's philosophy, working approach, and professional values.

Suggested sections:

1. Company introduction.
2. Engineering expertise and personalized attention.
3. Technical philosophy and decision-making approach.
4. Our working method.
5. Confidentiality and responsible handling of information.
6. Team presentation, if current photographs and identities are approved.
7. Contact CTA.

Use the client's documented four-stage working method:

Levantar → Analizar → Resolver → Verificar

Consider a visual process diagram or timeline.

Team photos

Existing team photographs are available, but some individuals no longer work at C&K.

Do not publish any team portrait until the client confirms that the person remains part of the company and approves its use.

If current team information is not confirmed, omit that section rather than using outdated photographs.

Do not invent employee names, job titles, biographies, or credentials.

PAGE 3 — SERVICIOS

Purpose: Present the company's technical capabilities in a clear, detailed, and credible way.

The page should be substantial but easy to navigate.

Use anchored sections or a service navigation menu.

Service 1 — Asesoría técnica y representación

Cover:

- Technical analysis.
- Resolution of technical discrepancies.
- Representation in meetings.
- Independent technical evaluation.
- Confidential handling of client information.

Service 2 — Ingeniería de diseño

Cover:

- Technical site visits.
- Electrical design.
- Planimetry and documentation.
- Coordination with other engineering disciplines.

Service 3 — Construcción eléctrica

Cover:

- Construction and modification of electrical installations.
- Low- and medium-voltage work as documented.
- Installation planning.
- Supervision and verification.

Service 4 — Mantención especializada

Cover:

- Preventive maintenance.
- Predictive maintenance.
- Corrective maintenance.
- Operational continuity.

Service 5 — Instalación de equipos de alta complejidad

Cover electrical infrastructure and installation support for specialized medical and industrial equipment.

Service 6 — Equipos y diagnóstico técnico

Cover:

- Electrical-variable analysis.
- Initial verification.
- Thermography.
- Grounding measurements.
- Insulation measurements.
- Georeferencing of electrical assets.
- Technical instrumentation.

The content document mentions specific instruments, including Elspec Pure BlackBox and AEMC equipment. Use their names and applications accurately.

Additional service — Asesoría tarifaria y cliente libre

Present this as an additional specialist service rather than silently changing the client's six-area framework.

Cover tariff analysis, electricity billing, consumption patterns, and evaluation of potential transitions to the cliente libre market.

Service presentation guidelines

Each service should include:

- A clear heading.
- A concise description.
- Relevant capabilities or process.
- Technical terminology grounded in the PDF.
- A CTA to request an evaluation.

Avoid huge uninterrupted text blocks.

Use tabs, content groups, cards, and editorial layouts where helpful, but ensure important content remains accessible and indexable.

PAGE 4 — PROYECTOS

Purpose: Demonstrate real-world expertise through completed electrical engineering and construction projects.

This is a newly added page to the original four-page proposal.

Portfolio layout

Use an elegant grid of project cards.

Each approved project may include:

- Project title.
- Client or industry, where disclosure is approved.
- Location, where appropriate.
- Category of work.
- Project photographs.
- Brief technical description.
- Challenge and scope.
- Solution provided.
- Outcomes, only where documented and approved.

Potential categories

- Infraestructura clínica.
- Construcción eléctrica.
- Proyectos industriales.
- Media tensión.
- Mantención y diagnóstico.
- Agro y viñedos.

Historical references

The archived website may provide candidates for inclusion.

Use them only as research leads. Confirm details, rights, and permission to publish client names or images.

Missing project data

If project photographs or approved descriptions are not available:

- Create clearly labeled placeholders in the development environment.
- Design reusable project card components.
- Keep the page ready to populate.
- Never present fictional projects as completed work.

A simple, elegant portfolio is preferable to an impressive-looking but inaccurate one.

PAGE 5 — CONTACTO

Purpose: Make it easy for businesses to request an engineering evaluation.

Main heading

Use the client's proposed messaging:

"Tu desafío merece la experiencia adecuada."

Contact form

Include:

- Nombre y apellido.
- Empresa u organización.
- Correo electrónico.
- Especialidad requerida.
- Cuéntanos sobre tu proyecto.

Service selection should include the relevant technical specialties and an "Otro" option.

Contact information

The supplied content document lists:

Email: contacto@cykingenieros.cl
WhatsApp: +56 9 8751 2250

These should be confirmed before publication.

Contact UX

- Clear form validation.
- Accessible input labels.
- Helpful success/error messages.
- Anti-spam protection.
- Direct WhatsApp contact option.
- Mobile-friendly layout.
- Appropriate privacy and confidentiality notice.

Because the website will be statically generated with Astro, use an approved external form-handling service or another compatible backend solution.

Do not create a nonfunctional form that only displays a success message.

Do not expose email credentials, passwords, or API secrets in frontend code.

---

6. REUSABLE DESIGN COMPONENTS

Build a consistent component system.

Suggested components:

- Header / navigation.
- Mobile navigation.
- Hero section.
- Section introduction.
- Service cards.
- Project cards.
- Industry cards.
- CTA buttons.
- Process timeline.
- Contact form.
- Footer.
- Breadcrumbs where useful.

Maintain consistent spacing, typography, hover states, and responsive behavior.

Use modular Astro components and avoid duplicated layout code.

---

7. IMAGES & MEDIA

Prioritize authentic materials supplied by the company.

Use images from repository:

- Official logos (transparent colorful logo in header and white logo in footer).
- Fotos-Equipo and Fotografia Karen Rodrìguez for Nosotros and Fotografia Karen Rodrìguez for contact form foto.
- Approved technical equipment photographs.
- Relevant historical assets, if recovered and cleared for reuse.

Form webarchive:

- Project photographs.
- Optional old promotional video, if appropriate.

May use free stock photographs of electricians, construction workers, or industrial facilities when there are no better provided image options from the company.

Optimize images for fast loading, using appropriate modern formats and responsive image sizes.

Provide meaningful alt text.

Do not use screenshots of Karen's mockup as content images.

---

8. TECHNICAL REQUIREMENTS

Framework

- Astro.
- TypeScript where useful.
- Static site generation.
- Semantic HTML.
- Modern, maintainable CSS.
- Minimal client-side JavaScript.
- Reusable components.
- Responsive layouts.

Hosting

Deploy to Hostinger Premium Web Hosting.

The website must work as a static Astro build:

```
npm run build
```

The generated `dist/` output should be deployable to Hostinger's `public_html/` directory.

Do not require a persistent Node.js server, SSR hosting, or an unnecessary hosting upgrade.

Performance

Prioritize:

- Fast first load.
- Lightweight pages.
- Optimized images.
- Minimal JavaScript.
- Stable layouts.
- Good Core Web Vitals.
- Lazy loading of below-the-fold media.

Accessibility

- Semantic headings.
- Keyboard-friendly navigation.
- Visible focus indicators.
- Sufficient color contrast.

- Responsive typography.
- Accessible forms.
- Appropriate reduced-motion behavior.

SEO foundations

Implement:

- Descriptive Spanish page titles.
- Unique meta descriptions.
- Open Graph metadata.
- Canonical URLs.
- XML sitemap.
- robots.txt.
- Logical heading structure.
- Descriptive URLs.
- Relevant structured data where appropriate.

Avoid invented claims, keyword stuffing, or guarantees about rankings.

Important infrastructure constraint

The domain already uses Microsoft 365 for corporate email.

Do not change the domain's nameservers, MX records, SPF, DKIM, DMARC, or other DNS settings during website development or deployment.

The new Astro website must not interfere with Microsoft 365.

---

9. CONTENT RULES

Use the client's 12-page PDF as the primary content source.

The supplied content is professional, detailed, and technical. Preserve its substance while making it easier to consume on a website.

Follow these rules:

1. Write all published copy in professional Chilean Spanish.
2. Retain accurate technical terminology.
3. Prefer concise headings and readable paragraphs.
4. Avoid generic marketing filler.
5. Do not fabricate testimonials, clients, case studies, results, statistics, or certifications.
6. Do not publish sensitive project information.
7. Do not list former employees without approval.
8. Preserve the client's emphasis on quality, precision, continuity, and confidentiality.

9. Clearly identify content requiring confirmation.
10. Use consistent terminology and the official company name.

---

10. INTERACTIONS & ANIMATION

Use subtle, professional interactions.

Appropriate examples:

- Smooth navigation.
- Gentle hover transitions.
- Carefully controlled reveal animations.
- Responsive navigation menu.
- Subtle card interactions.
- Accessible accordion sections, if useful.

Avoid:

- Excessive parallax.
- Full-screen animation sequences.
- Constant motion.
- Distracting effects.
- Autoplay video with sound.
- Heavy animation libraries without a clear purpose.

The focus should remain on the engineering company and its services.

---

11. DESIGN PRIORITIES

In order of importance:

1. Match Karen's preferred visual direction.
2. Establish a premium, trustworthy engineering identity.
3. Present the company's technical capabilities clearly.
4. Create a polished desktop and mobile experience.
5. Make services easy to discover.
6. Showcase real projects.
7. Encourage qualified inquiries.
8. Maintain excellent performance and accessibility.

---

12. EXPECTED DESIGN & DEVELOPMENT DELIVERABLES

Phase 1 — Design planning

Before building the complete website:

- Review the mockup screenshots.
- Extract the visual patterns.
- Review the supplied content document.
- Propose the five-page sitemap.
- Define color tokens, typography, spacing, and components.
- Propose the homepage structure.
- Identify missing content and assets.
- Highlight anything requiring client approval.

Phase 2 — Design implementation

Create a polished responsive website using Astro.

The homepage should establish the visual language for the remaining pages.

Use reusable components rather than unrelated page designs.

Phase 3 — Content integration

Integrate the client's copy into the appropriate pages.

Populate project sections only with approved information.

Keep all incomplete or provisional content clearly marked during development.

Phase 4 — Quality assurance

Verify:

- All five pages.
- Desktop, tablet, and mobile layouts.
- Navigation.
- Buttons and links.
- Contact form.
- Accessibility.
- Image optimization.
- SEO metadata.
- Build success.
- Deployment compatibility with Hostinger.

---

13. FINAL CREATIVE DIRECTION

Create a corporate website that feels like the digital presence of a technically sophisticated engineering consultancy.

The design should communicate competence before the visitor reads the details.

Think:

Precision. Technical confidence. Engineering excellence. Trust.

Use deep navy as the architectural foundation, muted gold as the refined accent, and white space to give the content room to breathe.

Large typography, thoughtful section composition, and disciplined layouts should create a distinctive identity.

Respect Karen's existing mockup, but refine it into a coherent, fully responsive, production-quality website.

The final result should feel deliberately designed for C&K Ingenieros — not assembled from a generic corporate template.
