HOMEPAGE DESIGN Brief — C&K INGENIEROS

Overall objective

Revise the homepage layout to create a modern, premium, highly credible and conversion-focused B2B website.

The homepage must be visually engaging but concise. Detailed descriptions should live on the dedicated Nosotros, Servicios and Proyectos pages.

Follow the navy, muted-gold and white design system established in the master brief and Karen's mockup.

Use the attached reference screenshots for layout inspiration, not for copying their unrelated branding, text, statistics or photographs.

01. HERO

Create a premium editorial-style hero section.

Headline:
Asesoría, Ingeniería y Construcción.

Supporting text:
Excelencia técnica en cada decisión. Rigor y precisión en cada proyecto eléctrico.

Include three concise technical benefits displayed vertically with elegant checkmark icons.

Suggested benefits:

- **Soluciones fundamentadas en evidencia técnica.**
- **Experiencia en infraestructura eléctrica crítica y continuidad operacional.**
- **Atención personalizada para cada desafío de ingeniería.**

Use muted-gold or another accessible accent color for the checkmark icons.

Include two prominent CTAs:

- Primary: **Explorar especialidades** → `/servicios/`
- Secondary: **Solicitar evaluación** → `/contacto/`

Keep the layout spacious and visually balanced.

Use strong typography, a dark navy background and carefully controlled gold accents.

Do not add unsupported numerical claims or statistics.

02. EMPRESAS QUE CONFÍAN EN NOSOTROS

Immediately below the hero, create a horizontal client logo strip inspired by the supplied screenshot.

Section heading:

Empresas que confían en nosotros

Design requirements:

- Clean white or very light neutral background.
- Approved client logos presented in grayscale.
- Consistent visual sizing and alignment.
- Subtle horizontal continuous scrolling.
- No distracting animations.
- Pause the movement on hover or keyboard focus.
- Respect `prefers-reduced-motion` and provide a static presentation when requested.
- Responsive on mobile devices.
- Avoid excessive spacing or oversized logos.

Display only genuine client logos supplied or explicitly approved by C&K.

Do not use the unrelated company logos visible in the reference screenshot.

If client logos have not yet been approved, build the reusable carousel component with clearly marked placeholders, but do not publish fictional client relationships.

03. NUESTRO ENFOQUE Y EXPERIENCIA

Create a concise introduction to C&K's philosophy.

Emphasize:

- Technical expertise.
- Evidence-based engineering decisions.
- Personalized consulting.
- Precision and execution quality.
- Confidentiality and professional responsibility.
- Experience with demanding electrical infrastructure.

Use an elegant two-column editorial layout on desktop.

Consider a short introductory statement, two or three supporting points, and an authentic approved technical image if available.

Do not reproduce the entire Nosotros page here.

CTA:

Conoce a C&K → `/nosotros/`

04. NUESTRAS ESPECIALIDADES

Display the six principal technical service areas.

Each service should have:

- Service name.
- Small relevant icon or restrained graphic element.
- Short description, ideally 20–35 words.
- **Conocer más** link.

The six services are:

1. Asesoría técnica y representación.
2. Ingeniería de diseño.
3. Construcción eléctrica.
4. Mantención especializada.
5. Instalación de equipos de alta complejidad.
6. Equipos y diagnóstico técnico.

Use a three-column by two-row grid on desktop, adapting to two columns on tablet and one column on mobile.

The cards should feel premium, consistent and technical.

Do not place lengthy service explanations on the homepage.

Each card must link directly to its corresponding anchored section on `/servicios/`.

Keep the additional Asesoría tarifaria y cliente libre service on the detailed Servicios page, with an optional secondary homepage reference if the layout benefits from it.

05. INDUSTRIAS QUE ATENDEMOS

Display three visually distinctive industry cards:

Salud
Electrical infrastructure for medical equipment and clinical operations with demanding continuity requirements.

Industria
Electrical engineering, specialized maintenance and technical diagnosis for industrial operations.

Agro y Viñedos
Electrical infrastructure, medium-voltage systems and technical solutions for agricultural and wine-producing operations.

Use authentic approved photographs where possible.

Keep descriptions concise and grounded in the client's content document.

Maintain a cohesive design across the three cards.

06. PROYECTOS DESTACADOS

Create a featured project section.

Show two or three selected projects with:

- High-quality project photographs.
- Project name.
- Technical category.
- Brief description.
- Link to the full project details if available.

Use real company projects only.

Never invent client names, performance results, photographs or technical outcomes.

If approved project content is not available, create placeholders during development.

CTA:

Ver todos los proyectos → `/proyectos/`

The dedicated Proyectos page will contain the full project portfolio.

07. CONVERSEMOS SOBRE TU PROYECTO

Create a personalized, premium contact section inspired by the attached example showing a company representative beside a lead-generation form.

This section should establish a human connection with the business.

Desktop layout:

- Left: Professional portrait of Karen, General Manager of C&K, subject to her approval.
- Right: Clean inquiry form inside a refined light-colored panel.

Include a concise title and introductory statement such as:

Conversemos sobre tu proyecto.

"Cuéntanos sobre tu desafío técnico. Evaluaremos tu requerimiento para identificar cómo podemos ayudarte."

Form fields:

- Nombre y apellido.
- Empresa u organización.
- Correo electrónico.
- Teléfono (optional).
- Especialidad requerida (dropdown).
- Cuéntanos sobre tu proyecto (textarea).
- Privacy consent, as appropriate.

Primary submission button:

Solicitar evaluación

Design requirements:

- Clear, readable form labels.
- Comfortable input sizes.
- Subtle borders and generous spacing.
- Professional styling consistent with the website's brand.
- Clear success and error states.
- Accessible validation.
- Responsive layout.
- Protection against automated spam submissions.

Mobile layout:

Stack the photo and form vertically. Maintain a clean and readable form layout without unnecessary scrolling or excessive decorative elements.

Use Karen's actual approved portrait, not a generated or stock executive photograph.

The form must submit successfully through a suitable integration compatible with static Astro hosting on Hostinger Premium.

Do not simulate form submissions or expose server-side credentials.

08. FOOTER

After the seven main homepage sections, create a consistent site-wide footer.

Include:

- C&K logo.
- Short company description.
- Main navigation.
- Contact email.

- WhatsApp contact.
- Relevant social links if confirmed.
- Copyright and privacy information.

Final homepage design principles

- The homepage must guide visitors naturally from introduction to credibility, expertise, services, industries, projects and inquiry.
- Avoid long walls of text.
- Use concise summaries linking to detailed internal pages.
- Create a consistent visual hierarchy.
- Ensure every CTA leads somewhere meaningful.
- Use subtle interactions, not decorative animation for its own sake.
- Maintain high performance, strong accessibility and mobile responsiveness.
- Preserve Karen's selected colors and preferred visual direction.
- Favor authentic company photography, approved projects and verified client relationships.

Implementation sequence

First develop and present the complete homepage in Astro for desktop and mobile.

Use this homepage to establish the site's typography, spacing, components, visual rhythm and interactions.

Once the homepage design is approved, continue building the four dedicated pages:

- Nosotros
- Servicios
- Proyectos
- Contacto

Keep the complete site compatible with Astro static generation and Hostinger Premium hosting.
